Why Security Today?

Sources of Inventory Shrinkage

Take control of your assets today

Inventory shrinkage, a combination of employee theft, shoplifting, vendor fraud and administrative error, cost United States retailers approximately \$37.4 billion last year according to the latest National Retail Security Survey report on retail theft.

The Survey results show that retailers lost 1.54 % of their total annual sales to inventory shrinkage.

One of the key findings is the increase in shoplifting, which accounted for 33 % of retail losses, up from 30.8 % in 2000. U.S. retailers lost nearly \$12.3 billion in sales to shoplifting.

The increase is attributed to a new form of shoplifting called organized retail crime, which involves shoplifting gangs working as a team to steal large quantities of merchandise quickly. Nearly half of retailer's shrinkage is due to employee theft. This relates to a price tag of \$17.6 billion. There is no other form of larceny that annually costs American citizens more money than employee theft.

The retail industry today is very competitive and retailers cannot afford to give up their profits to thieves. Dishonest employees and shoplifters tend to take the path of least resistance and will target a retail location that has not invested in technology to prevent theft. Switch to Alarmboss digital video system and get the right protection for your business.

Why Digital Video?

What makes DVRs better than VCRs

Digitally recorded images can be stored, transferred and transmitted over networks and phone lines with no loss of image quality. Digitally stored video will always look the same as the day the image were recorded.

Encrypted Watermarks and Thumb Prints offer a level of security that your video image is always authentic and can be used as evidence in court.

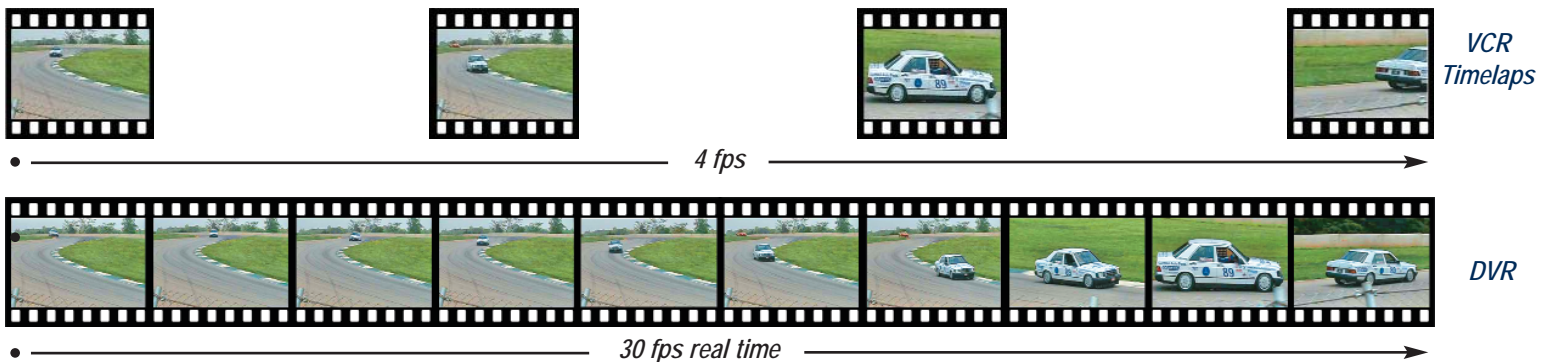

VCR

DVR

DVR vs. Analog Security Systems

Want long term digital storage? Say Goodbye to VHS tapes.

VCR images wear out quickly and degrade over time. They are often damaged as tapes can stretch or even tear, leaving images that simply cannot be trusted and used effectively as evidence in court.

Unlike VHS tapes that require serious real estate, digital video can be easily backed up and archived onto a number of digital formats. Once the image has been recorded, the video can be automatically backed up to hard drives, network servers, CD's or DVD's. Digitally backed up information can be accessed at any time and will always look exactly the same as the very day it was recorded.

E-mail

TEXT MESSAGING

Self Automated Video & Alarm Monitoring

Alarm Boss is an effective tool as a fully functional Video Alarm System

- Fully programmable web based schedule
- E-mail/Text-message alerts
- Remote video events storage
- Video loss, network, HDD, Fail notification
- Alarm and Building Automation compatible
